How to access the API Post method to get paid

1. Hosted page for the paymentsolo https://www.payit123.com/clients/paymentsolo.

2. We are using the POST Method only to post variables into
https://www.payit123.com/clients/paymentsolo/process_payment.php
 with Authorization bearer token.

3. Post variables are required and optional fields are given below

Field Name	Required/Optional	Description
fullName	**Required**	string [1 .. 100] Although optional, it is highly recommended to provide the full name of the customer, as the customer will be asked to provide it if not specified by you during the generation of the payment order; asking the customer to provide their full name, which they may have provided earlier, may cause them to abandon the checkout; this affects significantly the conversion rate of your online store.
amount	**Required**	integer <int64> >= 50 The amount associated with this payment order. The amount will be in the currency of your merchant account using the currency's smallest unit of measurement USD or EUR should be minimum **0.5** JPY should be minimum **100**
invoiceNumber	**Required**	String [1 .. 30] Invoice number will be added to the payment comments
email	**Required**	**Required** email field

currency	**Required**	String [1 .. 3] example , what currency you are paying like USD
phone	**Required**	String [1..10] give the 10 digit phone number
city	**Required**	String [1..50] city name
state	**Required**	Customer state code (2 digits code)
street1	**Required**	Customer street name is required
country	**Required**	Customer country code (2 digits code) example like US,CY
postal_code	**Required**	Customer Zip code
Authorization	**Required (if it is hit from the postman).**	Header Authorization have to sent to access the payment API **Authorization *Bearer 8e1fbd6f20ff0cfce4f40671a3bb2 396***
token	**Required(if it hosted page)**	**5e12cef38728dc61c68bfdf0cf1e d11d**
status_url	**Optional**	**Return response to this url**
return_url	**Optional**	**Return redirection to the url.**

4. Once you post the above required values right and send to API url, we will process your data and redirect into to Selected Payment method for payment

5. Once payment is initiated then if the application is hosted page, then we will redirect to the 3ds_validation_page_onramp.php page. https://www.payit123.com/clients/paymentsolo /3ds_validation.php?hash=i32892i9u23lkalsfns

6. If its not hosted page then will return the json format like below.

{"code":1,"status":"Pending","amount":"10.00","invoiceNumber":"test-199","message":"Client did not complete 3d","3DSUrl":"3dsurl"}

7. Once payment is done from the onramp page and successfully paid that page will display invoice with return button, while clicking the return will be navigate to our hosted page.

7. If it is not hosted page then below format will be display

{"code":0,"status":"Success","amount":"10.00","invoiceNumber":"test-199","message":" The transaction has been completed
successfully (PAYMENT
SUCCESSFUL)!","transactionId":"1000","Statement_Descriptor":"instaxchange.com"}

8.Status url response format like below.

{"code":0,"status":"Success","amount":"10.00","invoiceNumber":"test-199","message":" The transaction has been completed
successfully (PAYMENT
SUCCESSFUL)!","transactionId":"1000","Statement_Descriptor":"instaxchange.com"}

{"code":1,"status":"Failed","amount":"10.00","invoiceNumber":"test-199","message":" Transaction Failed
","transactionId":"1000","Statement_Descriptor":""}

9.Return_url – After successful payment,page showing the invoices from that we have to tab the Return to Store button.This will be route to the given return url .

Sales report access page
https://www.payit123.com/clients/paymentsolo/sales/
username: paymentsolo
password: #n$5sff)p2#

Get Transaction Order Status

https://www.payit123.com/clients/paymentsolo/get_order_status.php

With Authorization Bearer 8e1fbd6f20ff0cfce4f40671a3bb2396.

Field Name	Required/Optional	Description
